## **Principal's Message ...**

In the wake of the unprecedented Covid-19 pandemic and the subsequent lockdown measures implemented across the nation, there has been a pressing need to understand the intricate dynamics of its impact on the economic conditions of common people. Maharashtra, being one of the worst affected states in India, has witnessed profound disruptions across various sectors.

This survey, conducted by the Department of Economics, aims to delve deeper into the ramifications of the Covid-19 lockdown on the economic conditions of common people, focusing specifically on Deulgaon Raja City as a case study. Deulgaon Raja provides a microcosm through which to analyze the broader implications of the pandemic-induced lockdown on individuals and families.

Through a meticulous examination of data collected from surveys, interviews, and socioeconomic indicators, this study seeks to shed light on the challenges faced by the residents of Deulgaon Raja City. By exploring the loss of livelihoods, income reduction, rise in poverty, impact on small businesses, digital disparities, healthcare expenses, and psychological implications, this survey endeavors to provide a comprehensive understanding of the multifaceted nature of the crisis.

Furthermore, this research aims to serve as a catalyst for informed policy interventions and community-based initiatives aimed at mitigating the adverse effects of the pandemic and facilitating a resilient recovery. By highlighting the specific experiences and struggles of the people of Deulgaon Raja City, this survey endeavors to contribute valuable insights to the broader discourse on pandemic-induced economic challenges and the pathways to sustainable recovery.

We express our gratitude to the residents of Deulgaon Raja City for their participation and cooperation in this survey. Their invaluable insights have been instrumental in shaping this study and enriching our understanding of the profound impact of the Covid-19 lockdown on economic conditions at the grassroots level. We hope that the findings of this survey will inform evidence-based policymaking and community-driven initiatives aimed at fostering resilience, solidarity, and prosperity in the face of adversity.

# **“Impact of Covid-19 Lockdown on Economic Conditions of Common People in Maharashtra : A Case Study of Deulgaon Raja City”**

## **Introduction:**

The Covid-19 pandemic, with its associated lockdown measures, has had a profound impact on the economic conditions of common people in India. This report aims to analyze the various dimensions of this impact and shed light on the challenges faced by individuals and families across the country.

### **1. Loss of Livelihood:**

The lockdown resulted in the closure of businesses and a halt in economic activities, leading to widespread job losses. Daily wage earners, migrant workers, and those employed in the informal sector were particularly affected, as they lost their primary sources of income.

### **2. Income Reduction:**

Even for those who managed to retain their jobs, there were often salary cuts or reduced working hours. This resulted in a

decline in income for many families, making it difficult to meet basic needs and maintain their standard of living.

### **3. Rise in Poverty:**

The economic disruption caused by the lockdown led to a significant increase in poverty levels across the country. Many families who were previously above the poverty line were pushed below it, struggling to afford food, healthcare, and other essentials.

### **4. Impact on Small Businesses:**

Small and medium-sized enterprises (SMEs) faced severe challenges during the lockdown, with many forced to shut down permanently due to financial losses. This not only affected business owners but also their employees and the wider supply chain.

### **5. Digital Divide:**

The shift towards remote work, online education, and digital transactions highlighted the existing digital divide in the country. Those without access to reliable internet connectivity or digital devices faced barriers in accessing essential services and opportunities for income generation.

## **6. Healthcare Expenses:**

The pandemic brought additional financial burden on families due to healthcare expenses. Costs related to Covid-19 treatment, testing, and preventive measures strained household budgets, especially for those without health insurance.

## **7. Psychological Impact:**

Beyond the economic consequences, the lockdown also took a toll on people's mental health. Stress, anxiety, and depression increased due to concerns about health, finances, and uncertainty about the future.

The economic impact of the Covid-19 lockdown on common people in India has been severe and multifaceted. While the government has implemented various relief measures, the road to recovery remains long and challenging. It is imperative for both the government and the society to work together to address the underlying issues and support those most affected by the crisis.
